

Administration, maintenance and troubleshooting

THE TARGETS

This course provides a general overview of the *espresso* inspection system and its administration. The participants will get all necessary information to keep the system in normal working conditions with respect to the computer system. They will learn how to start up and shut down the system properly, perform basic diagnostics, and interpret diagnostic alarms. Furthermore, they will get an introduction into typical configuration tasks and the handling of system backups.

This course addresses *espresso* system users that will be involved in system administration, troubleshooting and/or regular maintenance.

THE CONTENTS

After a short introduction into the hardware and software of the *espresso* system, administration, maintenance and troubleshooting aspects will be discussed.

The content of this course comprises these topics:

- System overview, components and functional principles
- Operating basics for administrators
- Maintenance and exchange of components
- Basics of data storage
- System diagnostics and troubleshooting

TARGET AUDIENCE

- System administrator
- Maintenance personnel
- IT support personnel

PREREQUISITES

- Basic experience in the use of Microsoft Windows XP
